Breeze Job Finder

Three contracts, from frontend work to architecture

Breeze hired me for three contracts over six months, and my role grew each time. I started by building a live PDF resume editor, then designed and built a Chrome extension that wasn't in the original plan, and finally designed the job search and owned the architecture behind it.

TIMELINE

Mar 2025 → Sep 2025 · Three contract phases

ROLE

Contract engineer → design & architecture owner

TECHNOLOGY

React Router v7, Supabase, WXT, Gemini

PLATFORM

Web app + Chrome extension

3

Contracts, each wider in scope

9

Database tables designed

143

Backend tests written

IN BRIEF

01 Three contracts over six months, each wider in scope than the last.

02 Contract one: built the live PDF resume editor from the team's Figma designs, with an eleven-point ATS check.

03 Contract two: designed and built a Chrome extension that wasn't in the original plan, in under three weeks.

04 Contract three: designed the job search and owned the backend, with nine tables, 143 tests, and job sources behind one swappable interface.

05 After my handoff the team took the extension to version 1.0, and their later search kept my caching, deduplication, and logging.
